March 1920

Fomento - Trinidad -

The new R.R. passes many cuts of crystalline rock striking the impure lime at about Sopimpa. Thence for 10 miles or so to near Meyer is a wild region of heavily wooded cuts and a sandy impure limestone. We stopped at about Kil 46 where a construction gang are working & the regular train slows up enough to jump on or off. We worked bet. Kil 45-47 in every possible station. Very dry period. Our choice of region made the day before after careful survey of entire route from car window.
